

Melting Snowman

Science Experiment

Method

1. Add water to baking soda until it forms a dough.
2. Cut an orange triangle from the foam to make a snowman's carrot nose.
3. Place the nose and 2 black beads in the bottom of the plastic cup. Repeat as needed for the number of snowmen you want to make.
4. Add some of the dough mixture to the cup. If you'd like, add glitter. Then add more dough.
5. Place the cups in the freezer overnight.
6. Run hot water around the cups to loosen the snowmen and remove them from the cups.
7. Place your snowmen in a shallow tray or bowl.
8. Pour some vinegar in a bowl. Add food coloring, if desired, for effect.
9. Slowly pour the vinegar into the tray with the snowmen.
10. Watch them fizzle and melt!

You will need:

Small plastic cups

Baking soda

Vinegar

Water

Black beads

Orange foam paper

Glitter or food coloring (optional)
